

RND Power Solutions 8A Desktop Tower Charging Station

USB A and USB B are smart ports and will be given priority over the other ports if power needed to charge all devices exceeds 8amps

USB A

USB B

USB C

USB D

USB E

USB F

39mm

65mm

78mm

111mm

All USB Ports can charge 2.5 Amps up to a total of 8 Amps. When the total output is higher than 8 Amps the top two usb smart ports (USB A and B) will take priority using all the amps they need (up to 2.5 amps) in order to charge the fastest, the rest of the ports will share the leftover amps.

Port C&D are wired for Apple products enabling them to charge faster than if they were plugged into ports E&F.

Port E&F are more suitable for other devices including android.

6 USB Ports

40 Watt

8 Amps

Amperage needed to charge at full speed is dependent upon the device. Many tablets need over 2 Amps to charge at full speed while many phones are charged at 1-1.5 Amps. Please note that all usb devices can charge in any of the ports but charge speeds may vary depending on the port and the device as well as the cable being used.

Do not expose or use RND Power Solutions Smart Power Tower in high temperatures or humid environments. Keep away from fire and liquids. It is normal for the product to heat up slightly when in use.

Please contact RND Power Solutions if you are having issues with the product so we can assist you support@rndpowersolutions.com
